RAM COLD TAR PLUS SPRAY GUIDELINES

Airless sprayer capable of delivering 6 GPM or more and a minimum of 1800 PSI (equivalent to Graco GH2075 or GH2560 Roof Rig). Tip size will be a function of the sprayer flow rate and desired fan width. Based upon above units, we recommend an orifice size of 0.061 to 0.069. The following heavy duty tips from Graco would work: GHD861, GHD863, GHD867. These are all 16-18 inch fan widths, with orifice sizes of 0.061, 0.063, and 0.069, respectively, and flow rates of 4.0, 4.26 and 4.82 gallons per minute, respectively.

.061 = 4.0	.001 = .13
.063 = 4.26	.002 = .26
.069 = 4.82	.008 = 1.04
